UNDERGRADUATE DEGREE PROGRAMME

B.TECH COMPUTER SCIENCE AND ENGINEERING

CURRICULUM & SYLLABUS

REGULATIONS 2026

Effective from the Academic Year
2026-2027

Department of Computer Science and Engineering

School of Engineering

VELS
INSTITUTE OF SCIENCE, TECHNOLOGY & ADVANCED STUDIES (VISTAS)
(Deemed to be University Estd. u/s 3 of the UGC Act, 1956)
PALLAVARAM, THALAMBUR, PERIYAPALAYAM, THIRUVANMIYUR - CHENNAI

VISION OF THE INSTITUTION
To make the Institute an epitome of excellence in higher education by effectively providing high quality education and rigorous training to students in multiple streams of choice with ample scope for all round development to make them excel in their profession for betterment of the society.

MISSION OF THE INSTITUTION	
M1	Effectively imparting knowledge and inculcating innovative thinking.
M2	Facilitating skill enhancement through add on courses and hands on training.
M3	Doing original, socially relevant, high quality research.
M4	Instilling the spirit of integrity, equity, professional ethics and social harmony.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION OF THE DEPARTMENT
To develop a knowledge hub for Computer Science Engineers and Technocrats in application of their competence for the betterment of the Individual, Industry and Society.

MISSION OF THE DEPARTMENT	
M1	To nurture the students to be industry ready by providing a strong conceptual foundation and by enhancing their employability and entrepreneurial skills.
M2	To provide holistic growth by conducting relevant enrichment programs, which includes curricular, co-curricular, extra-curricular and extension activities.
M3	To inculcate innovation and creativity through practically viable Internships and Project works.
M4	To create a research oriented mindset and focus in fulfilling growing demands of the society through mentoring and lifelong learning.

PROGRAMME EDUCATIONAL OUTCOMES (PEO)	
PEO1	Exhibit strong Computer Science and Engineering knowledge to solve real-world problems using appropriate and emerging technologies.
PEO2	Demonstrate leadership and entrepreneurial skills in professional practice
PEO3	Engage in continuous learning and career advancement through adaptability and professional development.
PEO4	Uphold ethical values and contribute responsibly to society.

PROGRAMME OUTCOMES (PO)	
PO1	**Engineering Knowledge**: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
PO2	**Problem Analysis:** Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
PO3	**Design/Development of Solutions:** Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
PO4	**Conduct Investigations of Complex Problems:** Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
PO5	**Engineering Tool Usage:** Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)
PO6	**The Engineer and The World:** Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
PO7	**Ethics:** Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
PO8	**Individual and ColLaborative Team work:** Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
PO9	**Communication:** Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.
PO10	**Project Management and Finance:** Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
PO11	**Life-Long Learning:** Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

KNOWLEDGE AND ATTRIBUTE PROFILE (WK)	
The Knowledge and Attitude Profile (WK) is intended to define the essential knowledge base and professional attitudes expected of program graduates. It ensures alignment with OBE principles and equips graduates with the capability to effectively analyze and address complex engineering problem.	
WK1	A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social science
WK2	Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.
WK3	A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.
WK4	Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline
WK5	Knowledge, including efficient resource use, environmental impacts, whole-life cost, reuse of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.
WK6	Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.
WK7	Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.
WK8	Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.
WK9	Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

PROGRAMME SPECIFIC OUTCOMES (PSO)	
PSO1	An expert with an aptitude and competence to analyse, design, model, develop, test and manage information systems to offer customized solutions.
PSO2	A professional with learning abilities to face upcoming challenges in the field of Information Technology.

COMPETENCIES – PERFORMANCE INDICATORS

B.TECH COMPUTER SCIENCE AND ENGINEERING

PO1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.			
COMPETENCY		**PERFORMANCE INDICATORS**	
1.1	Demonstrate competence in mathematical modelling	1.1.1	Apply the knowledge of discrete structures, linear algebra, statistics and numerical techniques to solve problems
		1.1.2	Apply the concepts of probability, statistics and queuing theory in modeling of computer-based system, data and network protocols.
1.2	Demonstrate competence in basic sciences	1.2.1	Apply laws of natural science to an engineering problem
1.3	Demonstrate competence in engineering fundamentals	1.3.1	Apply engineering fundamentals
1.4	Demonstrate competence in specialized engineering knowledge to the program	1.4.1	Apply theory and principles of computer science and engineering to solve an engineering problem
PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)			
2.1	Demonstrate an ability to identify and formulate complex engineering problem	2.1.1	Evaluate problem statements and identifies objectives
		2.1.2	Identify processes/modules/algorithms of a computer-based system and parameters to solve a problem
		2.1.3	Identify mathematical algorithmic knowledge that applies to a given problem
2.2	Demonstrate an ability to formulate a solution plan and methodology for an engineering problem	2.2.1	Reframe the computer-based system into interconnected subsystems
		2.2.2	Identify functionalities and computing resources.
		2.2.3	Identify existing solution/methods to solve the problem, including forming justified approximations and assumptions
		2.2.4	Compare and contrast alternative solution/methods to select the best methods
		2.2.5	Compare and contrast alternative solution processes to select the best process.
2.3	Demonstrate an ability to formulate and interpret a model	2.3.1	Able to apply computer engineering principles to formulate modules of a system with required applicability and performance.
		2.3.2	Identify design constraints for required performance criteria.
2.4	Demonstrate an ability to execute a solution process and analyze results	2.4.1	Applies engineering mathematics to implement the solution.
		2.4.2	Analyze and interpret the results using contemporary tools.

		2.4.3	Identify the limitations of the solution and sources/causes.
		2.4.4	Arrive at conclusions with respect to the objectives.
PO3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and as required. (WK5)			
3.1	Demonstrate an ability to define a complex/ open-ended problem in engineering terms	3.1.1	Able to define a precise problem statement with objectives and scope
		3.1.2	Able to identify and document system requirements from stake- holders
		3.1.3	Able to review state-of-the-art literature to synthesize system requirements.
		3.1.4	Able to choose appropriate quality attributes as defined by ISO/IEC/IEEE standard
		3.1.5	Explore and synthesize system requirements from larger social and professional
		3.1.6	Able to develop software requirement specifications (SRS).
3.2	Demonstrate an ability to generate a diverse set of alternative design solutions	3.2.1	Able to explore design alternatives.
		3.2.2	Able to produce a variety of potential design solutions suited to meet functional requirements.
		3.2.3	Identify suitable non-functional requirements for evaluation of alternate design solutions.
3.3	Demonstrate an ability to select optimal design scheme for further development	3.3.1	Able to perform systematic evaluation of the degree to which several design concepts meet the criteria.
		3.3.2	Consult with domain experts and stakeholders to select candidate engineering
3.4	Demonstrate an ability to advance an engineering design to defined end state	3.4.1	Able to refine architecture design into a detailed design within the existing constraints.
		3.4.2	Able to implement and integrate the modules.
		3.4.3	Able to verify the functionalities and validate the design.
PO4: Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8)			
4.1	Demonstrate an ability to conduct investigations of technical issues consistent with their level of knowledge and understanding	4.1.1	Define a problem for purposes of investigation, its scope and importance
		4.1.2	Able to choose appropriate procedure/algorithm, dataset and test cases.
		4.1.3	Able to choose appropriate hardware/software tools to conduct the experiment.
4.2	Demonstrate an ability to design experiments to solve open-ended problems	4.2.1	Design and develop appropriate procedures/methodologies based on the study objectives
4.3	Demonstrate an ability to analyze data and reach	4.3.1	Use appropriate procedures, tools and techniques to collect and analyze data

	a valid conclusion	4.3.2	Critically analyze data for trends and correlations, stating possible errors and limitations
		4.3.3	Represent data (in tabular and/or graphical forms) so as to facilitate analysis and explanation of the data, and drawing of conclusions
		4.3.4	Synthesize information and knowledge about the problem from the raw data to reach appropriate conclusions
PO5: Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)			
5.1	Demonstrate an ability to identify/create modern engineering tools, techniques and resources	5.1.1	Identify modern engineering tools, techniques and resources for engineering activities
		5.1.2	Create/adapt/modify/extend tools and techniques to solve engineering problems
5.2	Demonstrate an ability to select and apply disciplinespecific tools, techniques and resources	5.2.1	Identify the strengths and limitations of tools for (i) acquiring information, (ii) modeling and simulating, (iii) monitoring system performance, and (iv) creating engineering designs.
		5.2.2	Demonstrate proficiency in using discipline-specific tools
5.3	Demonstrate an ability to evaluate the suitability and limitations of tools used to solve an engineering problem	5.3.1	Discuss limitations and validate tools, techniques and resources
		5.3.2	Verify the credibility of results from tool use with reference to the accuracy and limitations, and the assumptions inherent in their use.
PO6: The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7)			
6.1	Demonstrate an ability to describe engineering roles in a broader context, e.g. pertaining to the environment, health, safety, legal and public welfare	6.1.1	Identify and describe various engineering roles; particularly as pertains to protection of the public and public interest at the global, regional and local level
6.2	Demonstrate an understanding of professional engineering regulations, legislation and standards	6.2.1	Interpret legislation, regulations, codes, and standards relevant to your discipline and explain its contribution to the protection of the public
6.3	Demonstrate an understanding of the impact of engineering and industrial practices on	6.3.1	Identify risks/impacts in the life-cycle of an engineering product or activity
		6.3.2	Understand the relationship between the technical, socio-economic and environmental dimensions of sustainability

	social, environmental and in economic contexts		
6.4	Demonstrate an ability to apply principles of sustainable design and development	6.4.1	Describe management techniques for sustainable development
		6.4.2	Apply principles of preventive engineering and sustainable development to an engineering activity or product relevant to the discipline
PO7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)			
7.1	Demonstrate an ability to recognize ethical dilemmas	7.1.1	Identify situations of unethical professional conduct and propose ethical alternatives
7.2	Demonstrate an ability to apply the Code of Ethics	7.2.1	Identify tenets of the ASME professional code of ethics
		7.2.2	Examine and apply moral & ethical principles to known case studies
PO8: Individual and ColLaborative Team Work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.			
8.1	Demonstrate an ability to form a team and define a role for each member	8.1.1	Recognize a variety of working and learning pREFERENCE BOOKS; appreciate the value of diversity on a team
		8.1.2	Implement the norms of practice (e.g. rules, roles, charters, agendas, etc.) of effective team work, to accomplish a goal.
8.2	Demonstrate effective individual and team operations--communication, problemsolving, conflict resolution and leadership skills	8.2.1	Demonstrate effective communication, problem-solving, conflict resolution and leadership skills
		8.2.2	Treat other team members respectfully
		8.2.3	Listen to other members
		8.2.4	Maintain composure in difficult situations
8.3	Demonstrate success in a team-based project	8.3.1	Present results as a team, with smooth integration of contributions from all individual efforts
PO9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.			
9.1	Demonstrate an ability to comprehend technical literature and document project work	9.1.1	Read, understand and interpret technical and non-technical information
		9.1.2	Produce clear, well-constructed, and well-supported written engineering documents
		9.1.3	Create flow in a document or presentation - a logical progression of ideas so that the main point is clear
9.2	Demonstrate competence in listening, speaking, and	9.2.1	Listen to and comprehend information, instructions, and viewpoints of others
		9.2.2	Deliver effective oral presentations to technical and non-technical audiences

	presentation		
9.3	Demonstrate the ability to integrate different modes of communication	9.3.1	Create engineering-standard figures, reports and drawings to complement writing and presentations
		9.3.2	Use a variety of media effectively to convey a message in a document or a presentation
PO 10: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's work, as a member and leader in a team, to manage projects and in multidisciplinary environments.			
10.1	Demonstrate an ability to evaluate the economic and financial performance of an engineering activity	10.1.1	Describe various economic and financial costs/benefits of an engineering activity
		10.1.2	Analyze different forms of financial statements to evaluate the financial status of an engineering project
10.2	Demonstrate an ability to compare and contrast the costs/benefits of alternate proposals for an engineering activity	10.2.1	Analyze and select the most appropriate proposal based on economic and financial considerations.
10.3	Demonstrate an ability to plan/manage an engineering activity within time and budget constraints	10.3.1	Identify the tasks required to complete an engineering activity, and the resources required to complete the tasks.
		10.3.2	Use project management tools to schedule an engineering project, so it is completed on time and on budget.
PO 11: Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.			
11.1	Demonstrate an ability to identify gaps in knowledge and a strategy to close these gaps	11.1.1	Describe the rationale for the requirement for continuing professional development
		11.1.2	Identify deficiencies or gaps in knowledge and demonstrate an ability to source information to close this gap
11.2	Demonstrate an ability to identify changing trends in engineering knowledge and practice	11.2.1	Identify historic points of technological advance in engineering that required practitioners to seek education in order to stay current
		11.2.2	Recognize the need and be able to clearly explain why it is vitally important to keep current regarding new developments in your field
11.3	Demonstrate an ability to identify and access sources for new information	11.3.1	Source and comprehend technical literature and other credible sources of information
		11.3.2	Analyze sourced technical and popular information for feasibility, viability, sustainability, etc.
PSO 1: An expert who will be able to design, develop, analyze and apply acquired knowledge in computer software and hardware.			

12.1	Ability to investigate complex problems	12.1.1	Identify problem statements and develop smart solutions for real time applications
		12.1.2	Investigate all the probable solutions towards the identified problem
12.2	Design and Develop solutions systematically	12.2.1	Specify the design tools that may help in finding the solution
		12.2.2	Systematically evaluate and idenfyiy the testing strategies to develop an optimal solution
		12.2.3	Implement an optimal solution for the desired problem
PSO 2: A Professional who can solve problem in varied fields and appraise environmental as well as social issues with ethics.			
13.1	Develop cost benefit solutions using engineering principles and practices	13.1.1	Describe the rationale for choosing solutions based on engineering principles
		13.1.2	Conduct feasibility and cost-benefit analysis for implementing the solution
13.2	Ability to understand and develop the social and environmental issues using the current technology	13.2.1	Identify the problem and develop an appropriate solution
		13.2.2	Design solution with ethics for social and environmental problems

VELS INSTITUTE OF SCIENCE, TECHNOLOGY & ADVANCED STUDIES

(VISTAS)

(Deemed to be University Estd. u/s 3 of the UGC ACT, 1956)

SCHOOL OF ENGINEERING UG REGULATIONS - 2026

Effective from the academic year 2026-2027 and applicable to the students to be admitted in **School of Engineering, Vels Institute of Science, Technology & Advanced Studies (VISTAS),** Chennai.

1. PRELIMINARY DEFINITIONS AND NOMENCLATURE

In these Regulations, unless the context otherwise requires:

- "**Programme**" refers to the Degree Programme that is B.Tech.
- "**Discipline**" refers to specialization or branch of B.Tech. Degree Programme, like Electronics and Communication Engineering, Computer Science and Engineering etc.
- "**Course**" refers to theory or laboratory subject like Engineering Physics, Computer Programming etc.
- **"Registrar"** refers to the authority of the Institution who is responsible for all academic activities of the Departments for implementation of relevant rules and regulations.
- **"Controller of Examinations"** refers to the authority of the Institution who is responsible for all activities related to examinations.
- **"Institution"** refers to VELS INSTITUTE OF SCIENCE, TECHNOLOGY AND ADVANCED STUDIES (VISTAS**),** CHENNAI.

2. ADMISSION

2.1 First semester of the B.Tech. Degree Programme:

Passed 10+2 examination with Physics/ Mathematics/ Chemistry/ Computer Science/ Electronics/ Information Technology/ Biology/ Informatics Practices/ Biotechnology/ Technical Vocational subject/ Agriculture/ Engineering Graphics/ Business Studies/ Entrepreneurship as per table 8.4 Agriculture stream (for Agriculture Engineering) Obtained at least 45% marks (40% marks in case of candidates belonging to reserved category) in the above subjects taken together.

OR

Passed D.Voc. Stream in the same or allied sector.

Admission to the B.Tech. programmes shall be offered to candidates who satisfy the eligibility criteria prescribed by AICTE and have qualified in the VISTAS Scholastic Aptitude Test (VSAT) conducted by the University.

The selection of candidates shall be based on their performance in VSAT and/or academic performance in the qualifying examination, as prescribed by the University from time to time.

Candidates shall have passed the Higher Secondary Examination (10+2 pattern) or its equivalent with Physics, Chemistry, and Mathematics as compulsory subjects and shall satisfy the minimum eligibility requirements stipulated by VISTAS and the statutory authorities.

2.2 Lateral entry to second year

Passed Minimum THREE years / TWO years (Lateral Entry) Diploma examination with at least 45% marks (40% marks in case of candidates belonging to reserved category) in ANY branch of Engineering and Technology.

OR

Passed B.Sc. Degree from a recognized University as defined by UGC, with at least 45% marks (40% marks in case of candidates belonging to reserved category) and passed 10+2 examination with Mathematics as a subject.

OR

Passed B.Voc/3-year D.Voc. Stream in the same or allied sector.

2.3 Lateral entry to third year

Candidates with a UG Diploma in Engineering are eligible for lateral entry admission directly into the third year of the relevant undergraduate engineering programme.

2.4 Lateral entry to final year

Candidates with a B.Voc. degree in the relevant discipline are eligible for lateral entry admission directly into the final year of the corresponding undergraduate programme.

3. PROGRAMMES OFFERED

A candidate may be offered a programme in any one of the branches of study approved by the Institution.

4. STRUCTURE OF THE PROGRAMMES

4.1 Curriculum and Syllabi

Every Programme will have curriculum with syllabi consisting of theory and practicals such as:

COURSE CATEGORY	DESCRIPTION AND SPECIFIC DETAILS
Basic Science Course (BSC)	Mathematics, Physics, Chemistry, Biology, etc.
Program Core Courses (PCC)	Allows students to pursue a secondary interest (e.g., Cyber Security, Management, or even Performing Arts).
Professional Elective Course (PEC)	core courses relevant to the chosen specialization/branch.
Multi-disciplinary Core Courses (MDC)	Courses on sciences, humanities, or social sciences.
Multi-disciplinary Elective Courses (MDE)	Courses from other branches which a student can choose from the list specified in the curriculum of the students B. Tech. Programmes.

Skill Enhancement Courses (SEC)	Courses on hands-on technical skills, **employability skills**, soft skills, and life skills.
Ability Enhancement Courses (AEC)	Courses on language proficiency and communication skills.
Value-Added Courses (VAC)	Courses on **Indian Knowledge Systems (IKS)**, Environmental education and constitutional values
Summer Internship (SI)	Mandatory practical exposure in industry
Project Report and Dissertation (PRD)	Course on Mini project, Phase I and II

4.2 Course Components

Each course includes one or more of the following components,

- **Lecture:** Structured classroom teaching focused on theoretical concepts and subject knowledge delivery.
- **Tutorial:** Interactive learning session intended for discussion, problem-solving, clarification, and guided practice.
- **Practical:** Hands-on learning activity designed to apply theoretical knowledge through experiments, demonstrations, or fieldwork.
- **Self-Learning:** Independent learning undertaken by students through reading, online resources, assignments, projects, and self-paced study activities.

4.3 Personality and Character Development

All students will undergo structured professional development courses designed to enhance communication, aptitude, soft skills, leadership, and professional competencies of students from the 3rd to 6th semester, with one course offered in each semester. The courses shall focus on improving confidence, interpersonal skills, teamwork, problem-solving ability, and career readiness.

All students shall enroll, on admission, in any one of the personality and character development programmes (NCC/NSS/NSO/YRC) and undergo training for about 80 hours and attend a camp of about seven days. The training shall include classes on hygiene and health awareness and also training in first-aid.

National Service Scheme (NSS) will have social service activities in and around the Institution.

National Sports Organization (NSO) will have sports, Games, Drills and Physical exercises.

While the training activities will normally be during weekends, the camp will normally be during vacation period.

4.4 Credit Distribution

Each course is assigned certain number of credits based on the following:

Learning Component	Credit Calculation Basis

Lecture (L)	1 hour of teaching per week = 1 Credit
Tutorial (T)	1 hour of Interactive learning session per week = **1 Credit**
Practical/Lab (P)	2 hours of lab work per week = **1 Credit**

4.5 Pre-requisite for courses

- A prerequisite course is a course that must be successfully completed before a student is permitted to enroll in a designated higher-level course.
- The Course Coordinator and the Department shall verify and approve the fulfillment of prerequisite requirements after the declaration of the End Semester Examination results of the preceding semester.
- A student may be considered eligible for enrollment in the desired course if any one of the following conditions is satisfied:
    - The student has maintained a minimum attendance of 75% in the prerequisite course.
    - The student has secured at least 50% marks in the Continuous Internal Assessment (CIA) examinations of the prerequisite course.
    - The student has successfully completed an online certification in the same or a related subject through NPTEL or any recognized MOOC platform.
- Students who do not satisfy any of the above criteria, or who were unable to meet the requirements due to valid medical reasons supported by appropriate documentation, shall be required to undergo and successfully complete a 30-hour bridge/crash course conducted by the Department before being permitted to register for the desired course.

4.6 Industrial Training / Internship

The students may undergo Industrial training for a period as specified in the Curriculum during summer / winter vacation. In this case the training has to be undergone continuously for the entire period.

The students may undergo Internship at Research organization / University (after due approval from the Department) for the period prescribed in the curriculum during summer / winter vacation, in lieu of Industrial training.

4.7 Industrial Visit

Every student is required to go for at least one Industrial Visit every year starting from the second year of the programme. The Heads of Departments shall ensure that necessary arrangements are made in this regard.

4.8 Medium of Instruction

The medium of instruction is English for all courses, examinations, seminar presentations and project / thesis / dissertation reports.

4.9 Massive Open Online Courses (MOOCs)

- Students opting for an online course shall be required to register for the MOOCs

through SWAYAM-NPTEL with the guidance of SPOC/Mentors.

- Credit transfer policy will be applicable to –
  - All UG and PG programmes offered by the Institution.
  - All PCC/PEC/BSC/MDC/MDE/VAC courses offered by the corresponding program.
- Students should have successfully completed the course and received the Marksheet from SWAYAM to opt for credit transfer. They shall apply to the office of the COE through the HOD and SPOC.
- VISTAS shall award the credit of the equivalent core and elective course in the curriculum as credit for the courses completed via SWAYAM/ NPTEL platforms.
- VISTAS shall give the equivalent grade to the students for the credits earned through online learning courses through SWAYAM platform

SWAYAM Range of Marks	SWAYAM/ NPTEL Type of Certificate	Proposed Equivalent Grade Points (VISTAS)	Proposed Letter Grade (VISTAS)	Proposed Description (VISTAS)
90-100	Elite + Gold	10	O	Outstanding
75-89	Elite + Silver	9	A+	Excellent
60-74	Elite	8	A	Very Good
40-59	Successfully Completed	7	B+	Good

- Credits earned through MOOCs will be incorporated in the mark sheet /final mark sheet issued to the student by the Controller of Examination
- Students who have qualified in the examination conducted by the SWAYAM and opting for Credit Transfer shall be exempted from appearing in Continuous and Semester End examinations for the equivalent course.
- VISTAS also permit students to undergo the same courses and appear for Continuous and Semester End Examinations at VISTAS if they desire to do so for a better performance.

4.10 Honors and Minor Degree

- **Honours Degree**

An Honours Programme enables a student to acquire advanced knowledge and specialization in an emerging, multidisciplinary, or industry-relevant area within the same discipline/department. To earn an Honours credential, the student shall study and successfully complete additional courses carrying 18–20 extra credits beyond the credit requirements of the regular degree programme, as specified in the curriculum.

- **Minor Degree**

A Minor Degree enables a student to gain interdisciplinary knowledge and specialization in a discipline other than the parent department. To earn a Minor Degree, the student shall study and successfully complete additional courses carrying 18–20 extra credits beyond

the credit requirements of the regular degree programme, as specified in the curriculum of the respective department.

- Students who satisfy the eligibility criteria prescribed by the University may opt to pursue either an Honours Programme or a Minor Degree in addition to their regular degree programme. The award of an Honours Programme or Minor Degree shall be subject to the successful completion of the prescribed additional courses and the attainment of the required 18–20 extra credits**.** The detailed regulations, eligibility requirements, credit requirements, and award criteria shall be governed by the guidelines issued by the University from time to time.
- The Department shall offer Honours or Minor programmes irrespective of the number of students enrolled.
- If a student discontinues Honours:
  - The completed additional courses may be considered in place of Professional Electives.
  - Courses with higher grades will be considered for CGPA calculation.
  - The other completed courses will appear in the grade sheet but will not be accounted for CGPA calculation.
  - Failed courses or courses with shortage of attendance will not appear in the grade sheet or CGPA calculation.
- If a student discontinues Minor:
  - The completed additional courses may be considered in place of Open Electives.
  - Courses with higher grades will be considered for CGPA calculation.
  - The other completed courses will appear in the grade sheet but will not be accounted for CGPA calculation.
  - Failed courses or courses with shortage of attendance will not appear in the grade sheet or CGPA calculation.
- Students must register for honors or minor degrees separately for these additional courses and pay the prescribed tuition and examination fees.

4.11 Semester Abroad and Twinning Programmes

Students may undergo a Semester Abroad / Twinning Programme at approved foreign universities or Institutions having academic collaboration with the Institution. The maximum duration permitted for a Semester Abroad Programme shall be six months, while the maximum duration permitted for a Twinning Programme shall be one year. A maximum of 30% of the total credits prescribed for the degree programme may be earned through the Semester Abroad / Twinning Programme.

Courses and credits completed at the host institution shall be approved by the Department and may be transferred to the respective programme as per the norms of the Institution. Students shall comply with the academic and disciplinary regulations of both the parent institution and the host institution during the programme period.

4.12 Dual Degree

The programme shall be offered only through institutions having a valid academic collaboration or Memorandum of Understanding (MoU) with the parent institution.

Students opting for a Dual Degree Programme shall fulfill the eligibility criteria and academic requirements prescribed by both participating institutions. The duration,

course structure, credit transfer, and degree requirements shall be governed by the regulations approved by the respective institutions. Students shall comply with the

academic, disciplinary, and administrative rules of both institutions throughout the period of study.

The award of the dual degree shall be subject to the successful completion of all prescribed credits, project requirements, and assessment criteria of both programmes.

4.13 Joint Degree

The Institution may offer Joint Degree Programmes in collaboration with recognized national or international institutions having a valid academic collaboration agreement or Memorandum of Understanding (MoU).

The curriculum, duration of study, credit requirements, and evaluation pattern for the Joint Degree Programme shall be jointly approved by the participating institutions in accordance with the applicable regulatory norms. Students admitted to the Joint Degree Programme shall comply with the academic, administrative, and disciplinary regulations of all participating institutions. Credits earned at the partner institution shall be transferred and considered for the award of the Joint Degree as per the approved credit transfer policy of the Institution.

The Joint Degree shall be awarded upon successful completion of all prescribed academic requirements, including coursework, project work, internship, and examinations, as specified in the programme regulations.

4.14 Two Academic Programmes

A student may be permitted to pursue two academic programmes simultaneously, subject to the regulations and approval of the Institution where one of the two programmes may be pursued in online, open and distance learning, or hybrid mode, as permitted by the applicable regulatory norms.

The student shall satisfy the eligibility, attendance, academic, and examination requirements prescribed for both programmes independently. Credits earned in one programme shall not be transferred to the other programme unless specifically approved by the Institution.

The award of degrees shall be based on the successful completion of all requirements prescribed for the respective programmes.

4.15 Transfer of credits from other Institution

Students may be permitted to transfer credits earned from recognized Indian or Foreign Higher Educational Institutions, subject to the norms, conditions, and credit limits prescribed by the UGC.

- Twinning Programme: Credits earned from the Foreign Higher Educational Institution shall not exceed 30% of the total credits of the programme.
- Joint Degree Programme: Students must earn at least 30% of the total credits from

each of the Indian and Foreign Higher Educational Institutions.

- Dual Degree Programme: Students must earn at least 30% of the total credits from the Indian Institution.

4.16 Advanced and Differential Learners

Students securing a CGPA above 8.0 shall be identified as Advanced Learners and may be permitted to register for a maximum of three additional courses per semester along with flexible attendance provisions from the second year onwards.

Students requiring additional academic support shall be identified as Differential Learners and may be provided with bridge courses, remedial classes, mentoring, and other academic assistance measures

5. DURATION OF THE PROGRAMME

5.1 A student is expected to complete the B.Tech. Programme in 8 semesters (four academic years) but in any case, not more than 14 Semesters.

5.2 To support lifelong learning, the curriculum follows multiple entry multiple exit pathways as described below,

Pathway/Stage	Qualification Awarded	Additional Requirement	Re-entry & Validity Terms
Exit after Year 1	**Undergraduate (UG) Certificate**	Completion of a minimum of 40 credits followed by an additional **4-credit skill-based exit module** during the summer.	Credits earned are stored in the **Academic Bank of Credits (ABC)** and are typically valid for **7 years**.
Exit after Year 2	**Undergraduate (UG) Diploma**	Completion of a minimum of 80 credits followed by an additional **4-credit skill-based exit module**.	Students can return to the ecosystem to progress to the next level within the valid period.
Exit after Year 3	**B.Voc. degree**	Completion of a minimum of 120 credits followed by an additional **4-credit skill-based exit module**.	Students can return to the ecosystem to progress to the next level within the valid period.
Re-entry	**N/A (Vertical Mobility)**	Redemption of accumulated credits stored against the student's **APAAR ID** in the ABC.	Re-entry after the 7-year validity period requires **re-validation** of prior learning outcomes through fresh assessment.

5.3 Each semester shall normally consist of 90 working days or 450 periods. The Head of

the Department shall ensure that every teacher imparts instruction as per the number of periods / hours specified in the syllabus and that the teacher teaches the full content of the specified syllabus for the course being taught.

5.4 The total period for completion of the programme reckoned from the commencement of the first semester to which the candidate was admitted shall not exceed the maximum period specified in clause 5.1 irrespective of the period of break of study (vide clause 18.3) in order that he/she may be eligible for the award of the degree (vide clause 16).

5.5 In special and exceptional cases, a further extension of **one year** may be permitted with the approval of the **Executive Council (EC)**, subject to the recommendation of the Head of the Institution and compliance with the applicable regulations.

6. ATTENDANCE REQUIREMENTS

6.1 Students are expected to attend all classes regularly and maintain a minimum attendance of 75% in each course.

6.2 It is the responsibility of every student to monitor their attendance percentage in each course and ensure compliance with the attendance regulations prescribed by VISTAS. Any discrepancy in attendance records should be immediately brought to the notice of the concerned faculty member for necessary correction.

6.3 Attendance relaxation up to 10% may be considered for valid reasons such as medical emergencies, on-duty assignments, extracurricular or extramural activities, permitted academic assignments, job interviews, inter-university sports meets, competitions, and other unforeseen emergencies.

6.4 Students who do not maintain the minimum attendance requirement of 75% in any course will not be permitted to appear for the End Semester Examination for that course.

6.5 The registration for such course(s) will be treated as cancelled, and the student will be awarded an 'I' Grade ('I' indicates Incomplete / Registration cancelled due to shortage of attendance). This grade will remain in the grade sheet until the course is successfully completed.

6.6 Students who fail to maintain the minimum attendance requirement of 75% in one or two courses may be permitted to attend additional classes on payment of the prescribed fee, and shall be allowed to appear for the End Semester Examination upon securing full attendance and satisfactory performance in such classes, as recommended by the course instructor and approved by the Institution.

6.7 A candidate who secures overall attendance between 65% and 74% in that current semester due to medical reasons (prolonged hospitalization / accident / specific illness / Participation in Sports events) may be permitted to appear for the current semester examinations subject to the condition that the candidate shall submit the medical certificate attested by the Dean of the School.

6.8 The overall attendance below 65% shall not be condoned under any circumstances.

6.9 A student whose overall attendance is below 65%, or whose shortage of attendance has not been condoned, shall be detained from appearing for the End Semester Examination of that semester.

6.10 Such a student shall be required to re-register for and repeat the semester/course(s) in accordance with the regulations of the University and shall fulfill the prescribed attendance requirements afresh.

6.11 Students from the second year onwards securing a CGPA of 8.0 and above may be granted flexible attendance, subject to the approval of the Institution, to pursue approved academic, research, internship, innovation, or entrepreneurial activities.

7. CLASS ADVISER AND MENTORS

To help the students in planning their courses of study and for general advice on the academic programme, the Head of the Department of the students will attach a certain number of students to a teacher of the Department who shall function as Class Adviser for those students throughout their period of study. Such Class Advisers shall advise the students and monitor the courses undergone by the students, check the attendance and progress of the students attached to him/her and counsel them periodically. If necessary, the Class adviser may also discuss with or inform the parents about the progress of the students.

Every student will also be allotted a mentor from the faculty of the department to guide him/her personally. The mentors will work in close association with the Class advisor to understand the progress of the students and provide the needed guidance.

8. COURSE COMMITTEE

Each common theory course offered to more than one discipline or class of students shall have a "Course Committee" comprising all the teachers teaching the common course with one of them nominated as Course Coordinator.

The nomination of the course coordinator shall be made by the Head of the Department / Dean depending upon whether all the teachers teaching the common course belong to a single department or to several departments.

The 'Course committee' shall meet in order to arrive at a common scheme of evaluation for the assessments and shall ensure a uniform evaluation.

9. CLASS COMMITTEE

9.1 A Class Committee (CCM) shall be constituted for every class/semester consisting of the HoD, Chairperson, faculty members, and student representatives.

9.2 Each department shall nominate a faculty member as the Class Committee Coordinator to monitor and organize the meetings.

9.3 The Chairperson shall be nominated by the HoD and CCM Coordinator on a rotational basis.

9.4 Student representatives shall be selected based on academic performance, discipline, attendance, and participation in co-curricular/extracurricular activities, ensuring fair representation of all student categories.

9.5 Class Committee Meetings shall be conducted periodically, preferably before every assessment examination, as per the academic schedule.

9.6 The committee shall review syllabus coverage, teaching–learning processes, assessment methods, student performance, attendance, and discipline.

9.7 Student feedback regarding courses, faculty, infrastructure, placement training, and other academic/non-academic matters shall be discussed for continuous improvement.

9.8 Remedial actions, corrective measures, and follow-up plans for academic and

student-related issues shall be identified and implemented.

9.9 Minutes of the meeting, including discussions, decisions, and action taken reports, shall be properly documented and maintained in both soft and hard copies.

9.10 The Class Committee shall function as a quality enhancement mechanism to improve academic performance, student support, and the overall teaching–learning environment.

10. SYSTEM OF EXAMINATION

10.1 Performance in each course of study shall be evaluated based on (i) continuous assessment throughout the semester and (ii) End Semester Examinations at the end of the semester.

10.2 Each course, both theory and practical (including project work & Viva voce Examinations) shall be evaluated for a maximum of 100 marks.

10.3 For all theory and practical courses including project work, the continuous assessment will carry 40 marks while the End Semester examination will carry 60 marks.

10.4 Project work may be allotted to a single student or to a group of students not exceeding 4 per group.

10.5 For theory cum practical courses, the practical component will be evaluated during the continuous assessments. End Semester examination will be similar to theory courses for 60 marks.

10.6 The end semester examination (theory and practical) of 3 hours duration shall ordinarily be conducted between November and December during the odd semesters and between April and May during the even semesters.

10.7 The end semester examination for project work shall consist of evaluation of the final report submitted by the student or students of the project group (of not exceeding 4 students) by an external examiner followed by a viva-voce examination conducted separately for each student by a committee consisting of the external examiner, the guide of the project group and an internal examiner.

10.8 For the end semester examination in both theory and practical courses including project work the internal and external examiners shall be appointed by Controller of Examinations.

11. PROCEDURE FOR AWARDING MARKS FOR INTERNAL ASSESSMENT

11.1 Theory Courses

The distribution of internal assessment marks for theory courses shall be as follows:

S.No	Description		Marks
1	Two Continuous Assessment (C.A) Class Tests	(2 x 10)	**20**
2	Model Examination	(1 x 15)	**15**
3	Assignments / Class Seminar	(1 x5)	**05**
Total			**40**

11.2 Practical Courses

Every practical exercise / experiment shall be evaluated based on the exercise / experiment prescribed as per the syllabi and the records of work done maintained. There shall be at least one test during the semester. The criteria for arriving at the continuous assessment marks (40 marks) shall be decided based on the recommendation of the course committee/department advisory committee and shall be announced at the beginning of every semester by the Head of the Department.

11.3 Project Work:

11.3.1 The allotment of guides for eligible UG students must be done before the semester starts. All students are required to do Projects in Reputed Industry / Laboratory to promote academic industrial interaction and to provide professional expertise in selected fields of interest. Under this program, projects are formulated and implemented jointly by specialists from the industries and faculty members of the institute.

11.3.2 The Dean shall constitute a review committee for each branch of study. There shall be three reviews (each 100 Marks) during the semester by the review committee. The student shall make presentation on the progress made by him / her before the committee. The total marks obtained in the three reviews shall be reduced for 3 0 marks and rounded to the nearest integer. (This also implies equal weightage to all the three assessments), 5 marks shall be given for Attendance (Clause 11.3), and 5 marks shall be given for Student's Assesment by Faculty.

11.3.3 The project report shall carry a maximum 20 marks (same mark shall be awarded for the report submitted to every student within the project group) while the viva-voce examination shall carry 40 marks. (Marks are awarded to each student of the project group based on the individual performance in the viva-voce examination).

11.3.4 If a candidate fails to submit the project report on or before the specified deadline, he / she is deemed to have failed in the Project Work and shall re-register for the same in a subsequent semester.

11.3.5 Students who are entrepreneurs with registered startups may be permitted to undertake startup-based innovation activities in lieu of the final year project, subject to approval by the Institution.

11.4 Other Employability Enhancement Courses

11.4.1 The seminar is to be considered as purely INTERNAL (with 100% internal marks only). Every student is expected to present a minimum of 2 seminars per semester before the evaluation committee and for each seminar, marks can be equally apportioned. The three member committee appointed by Head of the Institution will evaluate the seminar and at the end of the semester the marks can be consolidated and taken as the final mark. The evaluation shall be based on the seminar paper (40%), presentation (40%) and response to the questions asked during presentation (20%).

11.4.2 The Industrial / Practical Training, Summer Project, Internship, shall carry 100 marks and shall be evaluated through internal assessment only. At the end of Industrial / Practical training / internship / Summer Project, the candidate shall submit a certificate from the organization where he / she has undergone training and a brief report. The evaluation will be made based on this report and a Viva- Voce

Examination, conducted internally by a three member Departmental Committee constituted by the Head of the Institution.

12. REQUIREMENTS FOR APPEARING FOR END SEMESTER EXAMINATIONS

A candidate shall be permitted to appear for the End Semester Examinations of any semester commencing from I semester if he/she has satisfied the semester completion requirements (subject to Clause 6) and has registered for examination in all courses of the semester. Registration is mandatory for semester examinations as well as arrear examinations, failing which the candidate will not be permitted to move to the higher semester.

A candidate who has already appeared for any subject in a semester and passed the examination is not entitled to reappear in the same subject for improvement of grades / marks.

13. PASSING REQUIREMENTS

13.1 A candidate who secures not less than 40% of total marks prescribed for the end-semester Examination in both theory and practical courses (including Project work), shall be declared to have passed the Examination.

13.2 If a candidate fails to secure a pass in a particular course, it is mandatory that he/she shall register and reappear for the examination in that course during the subsequent semester when examination is conducted in that course; he/she should continue to register and reappear for the examinations in the failed subjects till he / she secures a pass.

13.3 The continuous assessment marks obtained by the candidate in the first appearance shall be retained and considered valid for all subsequent attempts till the candidate secure a pass.

14. AWARD OF LETTER GRADES

14.1 Grade Conversion Table

The performance of students in each course shall be indicated by Letter Grades and Grade Points based on the range of marks secured, as prescribed in the Grade Conversion Table approved by the Institution.

Range of	Grade Points	Letter Grade	Description
90 – 100	10	O	Outstanding
82 – 89	9	A+	Excellent
75 – 81	8	A	Very Good
67 – 74	7	B+	Good
60 – 66	6	B	Above Average
50 – 59	5	C	Average

40 – 49	4	D	Minimum for Pass
00 – 39	0	RA	Reappear
		AA	Absent

14.2 Calculation of GPA and CGPA

The Grade Point Average (GPA) for the semester GRADE POINT AVERAGE [GPA] is calculated as follows,

$$GPA = \frac{\sum(C \times GP)}{\sum(C)}$$

The Cumulative Grade Point Average (CGPA) is calculated as follows,

$$CGPA = \frac{\sum_{=1}^{n} (C_i \times GP_i)}{\sum_{i=1} C}$$

where,

n - Number of subjects.

C - Credit for the academic courses successfully completed.

GP - Grade point for the academic courses successfully completed.

15. REVALUATION / PHOTOCOPY / REVIEW

15.1 A candidate can apply for revaluation of his/her semester examination answer paper in a theory course, within 2 weeks from the declaration of results, on payment of a prescribed fee through proper application to the Controller of Examinations through the Dean of the School. A candidate can apply for revaluation of answer scripts for not exceeding 5 subjects at a time. The Controller of Examination will arrange for the revaluation and the results will be intimated to the candidate concerned through the Dean of the School. Revaluation is not permitted for practical courses, seminars, practical training and for project work.

15.2 A candidate can apply for photocopy of his/her semester examination answer paper in a theory course, within 2 weeks from the declaration of results, on payment of a prescribed fee through proper application to the Controller of Examinations through the Head of Department. The answer script is to be valued and justified by a faculty member, who handled the subject and recommend for revaluation with breakup of marks for each question. Based on the recommendation, the candidate can register for the revaluation through proper application to the Controller of Examinations. The Controller of Examinations will arrange for the revaluation and the results will be intimated to the candidate concerned through the Head of the Department. Revaluation is not permitted for practical courses and for project work.

15.3 A candidate can apply for revaluation of answer scripts for not exceeding 5 subjects at a time.

15.4 Candidates not satisfied with Revaluation can apply for Review of his/ her examination answer paper in a theory course, within the prescribed date on payment of a prescribed fee through proper application to Controller of Examination through the Head of the Department. Candidates applying for Revaluation only are eligible to

apply for Review.

16. ELIGIBILITY FOR THE AWARD OF THE DEGREE

A student shall be declared to be eligible for the award of the Degree if he/she has,

- Successfully gained the required number of total credits as specified in the Curriculum corresponding to his/her Programme within the stipulated time.
- No disciplinary action is pending against him/her.
- Successfully completed the field visit / industrial training, if any, as prescribed in the curriculum.
- The award of the degree must be approved by the Executive Council.

17. CLASSIFICATION OF THE DEGREE AWARDED`

17.1 A candidate who qualifies for the award of the degree having passed the examination in all the courses in his / her first appearance within the specified minimum number of semesters securing a CGPA of not less than 7.5 shall be declared to have passed the examination in First class with Distinction. For the purpose the withdrawal from examination will not be construed as an appearance. Further, the authorized break of study will not be counted for the purpose of classification.

17.2 A candidate who qualifies for the award of the degree having passed the examination in all the courses in his / her first appearance within the specified minimum number of semesters plus one year (two semesters), securing a CGPA of not less than 6.50 shall be declared to have passed the examination in First class. Further, the authorized break of study will not be counted for the purpose of classification.

17.3 All other candidates who qualify for the award of the degree shall be declared to have passed the examination in Second Class.

17.4 Students who have been admitted from other Universities under Inter University Transfer are not eligible for Classification.

18. PROVISION FOR WITHDRAWAL FROM END-SEMESTER EXAMINATION

18.1 A candidate who qualifies for the award of the degree having passed the examination in all the courses in his / her first appearance within the specified minimum number of semesters securing a CGPA of not less than 7.5 shall be declared to have passed the examination in First class with Distinction. For the purpose the withdrawal from examination will not be construed as an appearance. Further, the authorized break of study will not be counted for the purpose of classification.

18.2 A candidate who qualifies for the award of the degree having passed the examination in all the courses in his / her first appearance within the specified minimum number of semesters plus one year (two semesters), securing a CGPA of not less than 6.50 shall be declared to have passed the examination in First class. Further, the authorized break of study will not be counted for the purpose of classification.

18.3 All other candidates who qualify for the award of the degree shall be declared to have passed the examination in Second Class.

18.4 Students who have been admitted from other Universities under Inter University Transfer are not eligible for Classification.

19. PROVISION FOR AUTHORISED BREAK OF STUDY

19.1 Break of Study shall be granted only once for valid reasons for a maximum of one year during the entire period of study of the degree programme. However, in extraordinary situation the candidate may apply for additional break of study not exceeding another one year by paying prescribed fee for break of study. If a candidate intends to temporarily discontinue the programme in the middle of the semester for valid reasons, and to rejoin the programme in a subsequent year, permission may be granted based on the merits of the case provided he / she applies to the Registrar in advance, but not later than the last date for registering for the end semester examination of the semester in question, through the Dean of the School stating the reasons therefor and the probable date of rejoining the programme.

19.2 The candidate permitted to rejoin the Programme after the break shall be governed by the Curriculum and Regulations in force at the time of rejoining. If the Regulations is changed, then, those candidates may have to do additional courses as prescribed by the Dean, School of Engineering.

19.3 The authorized break of study (for a maximum of one year) will not be counted for the duration specified for passing all the courses for the purpose of classification. (Vide Clause

14). However, additional break of study granted will be counted for the purpose of classification.

19.4 The total period for completion of the Programme reckoned from, the commencement of the first semester to which the candidate was admitted shall not exceed the maximum period specified in clause 5.1 irrespective of the period of break of study (vide clause 18.3) in order that he/she may be eligible for the award of the degree.

19.5 If any student is detained for want of required attendance, the period spent in that semester shall not be considered as permitted 'Break of Study' (Clause 18.3) is not applicable for this case.

20. DISCIPLINE

Every student is required to observe disciplined and decorous behavior both inside and outside the Institution and not to indulge in any inappropriate or unethical activity. The Registrar shall constitute a disciplinary committee consisting of Dean, Two Heads of Department of which one should be from the faculty of the student, to enquire into acts of indiscipline and notify the Institution about the disciplinary action recommended for approval. In case of any serious in disciplinary action which leads to suspension or Dismissal, then a committee shall be constituted by the Institution. In this regard, the member will be nominated by Institution on getting information from the Head of School.

If a student indulges in malpractice in any of the end semester / internal examination he / she shall be liable for punitive action as prescribed by the Institution from time to time.

21. REVISION OF REGULATIONS AND CURRICULUM

The Institution may from time-to-time revise, amend or change the Regulations, Curriculum, Syllabus and scheme of examinations through the Academic Council with the approval of Board of Studies.

CREDIT DISTRIBUTION

SEMESTER I

	MATHEMATICS-I (CALCULUS AND LINEAR ALGEBRA)		L	T	P	SL	C
			3	0	2	4	4
PRE-REQUISITE	NIL	CO-REQUISITE	NIL				

COURSE OBJECTIVES

- To build knowledge in differential, integral and multivariable calculus for solving engineering and scientific problems.
- To impart fundamental concepts of matrices, vector spaces, eigenvalues, eigenvectors and linear transformations used in engineering applications.
- To provide a strong mathematical foundation for advanced studies in mathematics, data science and engineering disciplines.

UNIT I	CALCULUS	12 HOURS

Rolle's theorem-Mean value theorems-Taylor's and Maclaurin theorems -Indeterminate forms and L'Hospital's rule-Curvature – cartesian and polar coordinates – Circle of curvature – Involutes and Evolutes – Envelopes –properties of envelopes – Evolute as envelope of normals.

UNIT II	SEQUENCES AND SERIES AND MULTIVARIABLE CALCULUS	12 HOURS

Limits of sequence of numbers, Calculation of limits, Infinite series, Tests for convergence, Power series, Taylor and Maclaurin series.Limit continuity, partial derivatives and total derivative, Jacobian-Functional dependence and Independence, Maxima and minima and saddle points, Method of Lagrange multipliers.

UNIT III	INTEGRAL CALCULUS (MULTIPLE INTEGRALS)	12 HOURS

Introduction - Double integrals- triple integrals- change of order of integration-change of variables to polar- cylindrical and spherical coordinates-Finding areas (by double integrals) and volumes (by double integrals and triple integrals).

UNIT IV	MATRICES	12 HOURS

Introduction, -Types of matrices. Rank of a matrix - echelon form, normal form, consistency system of linear equations (Homogeneous and Non-Homogeneous). Eigen values and Eigen vectors and their properties (without proof), Cayley-Hamilton theorem (without proof), Diagonalisation

UNIT V	VECTOR SPACES	12 HOURS

Space- linear Independence and dependence of vectors, basis, dimension- Linear transformations (maps), range and kernel of a linear map, rank and nullity- Inner product spaces-Gram-Schmidt Orthogonalization.

TOTAL HOURS: 60 HOURS & SELF LEARNING : 60 HOURS

CODE BSC	ENGINEERING CHEMISTRY		L 3	T 0	P 0	SL 3	C 3
PRE-REQUISITE	NIL	CO-REQUISITE	NIL				

COURSE OBJECTIVES

- To gain knowledge of molecular orbitals, ionic interactions, and periodic trends.
- To analyze periodic properties, including ionization energy, electronegativity, and oxidation states.
- To outline the key chemical reactions involved in molecular synthesis

UNIT I	PERIODIC PROPERTIES OF ELEMENTS	9 HOURS

Introduction to Periodic Properties- Modern periodic law, Classification of elements, variation of s, p, d and f-block elements - orbital energies of atoms in the periodic table, Effective nuclear charge, penetration of orbitals. Atomic and Ionic Radii, Ionization Energy, Electron Affinity,Electronegativity - Definition - Scales of electronegativity (Pauling scale – qualitative) - Valency and Oxidation States**,** Periodic variation of properties.

UNIT II	SPECTROSCOPIC TECHNIQUES AND APPLICATIONS	9 HOURS

Interaction of electromagnetic radiation with matter - Types of spectra: absorption and emission - Regions of electromagnetic spectrum. Principles of spectroscopy and selection rules. Electronic transitions - Beer–Lambert law - Principle of UV–Visible spectroscopy - Instrumentation and working of UV spectrophotometer and its applications. Fluorescence and phosphorescence - Importance and applications. Rotational spectroscopy of diatomic molecules and Vibrational Spectroscopy, Instrumentation and working of IR spectrophotometer.Applications

UNIT III	THERMODYNAMICS, ELECTROCHEMISTRY AND CORROSION	9 HOURS

Thermodynamic functions: energy, entropy, free energy. Free energy and emf.Cell potentials, the Nernst equation and its applications.Electrochemical and electrolytic cells – primary and secondary batteries. Fuel cells: H_2-O_2fuel cell- photovoltaic cell - Solar cells. Water Quality parameters, Water Treatment – Demineralization Process– Reverse osmosis process. Corrosion – Wet and Dry Corrosion , Methods of Corrosion Control – Sacrificial anodic protection and impressed current cathodic Protection methods.

UNIT IV	ATOMIC AND MOLECULAR STRUCTURE, COORDINATION CHEMISTRY	9 HOURS

Molecular orbital diagrams of diatomic molecules. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic molecules. Pi-molecular orbitals of butadiene and benzene. Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Ionic, dipolar and van Der Waals interactions, Band structure of solids and the role of doping on band structures.Coordination numbers and geometries, hard soft acids and bases, molecular geometries.

UNIT V	ORGANIC REACTIONS AND SYNTHESIS OF A DRUG MOLECULE	9 HOURS

Introduction to Organic Reactions - Classification of organic reactions - Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization, Coupling reaction and

ring openings. . Synthesis of a commonly used drug molecule - Stepwise synthesis of Aspirin / Paracetamol / Ibuprofen

TOTAL HOURS: 45 HOURS & & SELF LEARNING : 45 HOURS

CODE	FUNDAMENTALS OF ELECTRICAL AND ELECTRONICS SCIENCES	L	T	P	SL	C
		3	0	0	3	3

PRE-REQUISITE	NIL	CO-REQUISITE	NIL

COURSE OBJECTIVES

- To impart the foundational concepts of electrical circuits and digital electronics in various applications

UNIT I	DC FUNDAMENTALS	9 HOURS

Electrical quantities, Ohm's Law, Resistors - Series and parallel combinations, Current Division rule, Voltage Division rule, Source transformation - Kirchoff's laws, node voltage and mesh current methods, Delta-star and star delta conversion, Superposition principle, Thevenin's and Norton's theorems

UNIT II	AC FUNDAMENTALS	9 HOURS

Sinusoids and phasor relationships, Impedance and Admittance; sinusoidal steady-state analysis; AC power analysis- Instantaneous and average power, RMS, apparent and PF, complex power

UNIT III	FUNDAMENTALS OF ELECTRICAL MACHINES	9 HOURS

DC motor - Construction– principle of operation – torque equation – types – electrical & mechanical characteristics–starting – speed control – various testing – braking. Transformers – principle of operation – types – basic construction – equivalent circuit - regulation and efficiency – auto transformer

UNIT IV	SOURCES OF ENERGY	9 HOURS

General structure of electrical power systems, Power transmission and distribution via overhead lines and underground cables, Steam, Hydel, Gas and Nuclear power generation. Renewable Energy: Solar and Wind.

UNIT V	BASIC SEMICONDUCTOR DEVICES	9 HOURS

PN junction diode- construction and operation, Current equations, Diffusion and drift current densities, forward and reverse bias characteristics, Breakdown in PN Junction Diodes. Applications- Rectifiers, Limiting and Clamping Circuits, Zener diode-construction and VI characteristics. Design and Experimental Verification of Diode Characteristics (PN and Zener) and applications (Rectifiers and Voltage Regulators).

TOTAL HOURS: 45 HOURS & SELF LEARNING : 45 HOURS

After completion of the course, the student will be able to

COURSE OUTCOMES	DESCRIPTION	KNOWLEDGE LEVEL
CO1	Apply electrical laws and network theorems to solve DC circuits using various methods and transformations.	**K3**
CO2	Analyze AC circuits using phasors, impedance concepts and power parameters under sinusoidal steady-state conditions.	**K4**
CO3	Explain the construction, working principles, and performance characteristics of DC machines and transformers.	**K2**
CO4	Describe the structure and operation of power systems in conventional and renewable energy sources.	**K2**
CO5	Understand the operation and characteristics of semiconductor devices in practical circuits.	**K2**

CODE	STRUCTURED AND OBJECT ORIENTED PROGRAMMING	L	T	P	SL	C
		3	0	0	3	3

PRE-REQUISITE	NIL	CO-REQUISITE	NIL

COURSE OBJECTIVES

- To impart fundamental knowledge of structured programming concepts and problem-solving techniques using the C programming language.
- To develop programming proficiency in arrays, functions, pointers, structures, and file handling for designing efficient computational solutions.
- To build competency in object-oriented programming concepts using C++ for developing modular, reusable, and scaLable applications.

UNIT I	FUNDAMENTALS OF C PROGRAMMING	9 HOURS

Introduction to programming paradigms – Overview and applications of C – Structure of a C program – Algorithm and flowchart basics – Data types, variables, constants, and keywords – Operators and expressions – Operator precedence and associativity – Input/Output statements – Conditional statements (if, if-else, nested if) – Switch statement – Looping statements (for, while, do-while) – Preprocessor directives – Compilation and execution process.

UNIT II	ARRAYS, STRINGS, AND FUNCTIONS IN C	9 HOURS

Arrays: Declaration, initialization, one-dimensional and two-dimensional arrays – String handling: basic operations (length, copy, concatenate, compare) – Introduction to functions: function prototype, definition, function call – Parameter passing (pass by value) – Recursion (basic concepts and examples) – Simple algorithms: linear search, selection sort.

UNIT III	POINTERS AND USER-DEFINED DATA TYPES IN C	9 HOURS

Pointers: Declaration, initialization, pointer operators, pointer arithmetic – Arrays and pointers – Passing parameters by reference – Structures: declaration, initialization, nested structures, array of structures – Union and typedef – Storage classes and scope – File Processing: Files – Types of file processing: Sequential access, Random access – Sequential access file – Random access file – Command line arguments.

UNIT IV	INTRODUCTION TO C++ AND OBJECT-ORIENTED PROGRAMMING	9 HOURS

Transition from C to C++ – Basic structure of C++ program – Input/Output using cin and cout – Introduction to Object-Oriented Programming concepts – Classes and objects – Access specifiers (public, private, protected) – Constructors and destructors (default and parameterized) – Basic examples.

UNIT V	OBJECT-ORIENTED FEATURES AND FILE HANDLING IN C++	9 HOURS

Inheritance: single and multilevel inheritance – Function overloading– Introduction to polymorphism – Virtual functions and abstract classes – Exception handling (try, catch, throw) – File handling in C++: file streams, reading and writing text files – Basic introduction to templates

TOTAL: 45 HOURS & SELF LEARNING : 45 HOURS

CODE	TECHNICAL ENGLISH	L	T	P	SL	C
		2	0	0	2	2

PRE-REQUISITE	NIL	CO-REQUISITE	NIL

COURSE OBJECTIVES

- To develop students' vocabulary and word formation skills for effective written communication.
- To enhance learners' ability to construct grammatically correct and meaningful sentences.
- To enable students to identify and correct common errors in English usage.
- To improve students' skills in precise, coherent, and context-appropriate writing.
- To train learners in various forms of practical writing, including letters, reports, essays, and comprehension-based responses.

UNIT I	VOCABULARY BUILDING	6 hours

General Vocabulary, Parts of Speech, Nouns--Compound nouns, Pronouns, Adjectives, Synonyms & Antonyms, Prefixes & Suffixes, Homonyms, Homographs & Homophones, Verb Forms, Blending and Clipping.

UNIT II	BASIC WRITING	6 hours

Sentences structures –Kinds of sentences, Types of sentences, Clauses and Phrases, Numerical Expressions, Summarizing, Paragraph Writing, Checklist, Definitions, Precise Writing.

UNIT III	COMMON ERRORS IN ENGLISH	6 hours

Identify and correct grammatical and syntactic errors, in English Language use such as Pronouns - Relative pronouns, Demonstrative pronouns, Articles, Prepositions, Tenses, Subject-verb Agreement, Misplaced Modifiers, Redundancies, Infinitives & Gerund.

UNIT IV	NATURE AND STYLE OF WRITING	6 hours

Definitions, Numerical Expressions, Precise writing**,** Conversations/ Situational Dialogues, Process description, Recommendation, Information Transfer- Flow chart Bar chart and Pie chart, Letter Writing, Report Writing.

UNIT V	FUNDAMENTALS OF COMMUNICATION	6 hours

Listening to general information-specific details- conversation: Introduction to classmates, Telephone conversation, Debates and panel discussions, Self-Introduction, Introducing a friend; Conversation, Reading brochures (technical context), telephone messages / social media messages relevant to technical contexts and emails. Group discussions, and Expressing opinions, Simulations & Role play. Reading editorials; and Opinion Blogs.

TOTAL HOURS : 30 HOURS & SELF LEARNING : 30 HOURS

CODE	UNIVERSAL HUMAN VALUES : UNDERSTANDING HARMONY		L	T	P	SL	C
			3	0	0	3	3
PRE-REQUISITE	NIL	CO-REQUISITE	NIL				

COURSE OBJECTIVES

- To understand the need, significance, and process of value education for achieving continuous happiness and prosperity in human life.
- To develop self-exploration and right understanding about harmony within oneself, including the relationship between the self ('I') and the body.
- To analyze and appreciate harmony in family, society, nature, and existence through mutual trust, respect, and coexistence.
- To apply holistic human values and ethical principles in professional life for developing socially responsible and eco-friendly technologies and management practices.

UNIT I	COURSE INTRODUCTION - NEED, BASIC GUIDELINES, CONTENT AND PROCESS FOR VALUE EDUCATION	9 HOURS

Understanding the need, basic guidelines, content and process for Value Education, Self-Exploration–what is it? - its content and process; 'Natural Acceptance' and Experiential Validation- as the mechanism for self exploration, Continuous Happiness and Prosperity- A look at basic Human Aspirations, Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of aspirations of every human being with their correct priority, Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario, Method to fulfill the above human aspirations: understanding and living in harmony at various levels

UNIT II	UNDERSTANDING HARMONY IN THE HUMAN BEING - HARMONY IN MYSELF	9 HOURS

Understanding human being as a co-existence of the sentient 'I' and the material 'Body', Understanding the needs of Self ('I') and 'Body' - Sukh and Suvidha, Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer), Understanding the characteristics and activities of 'I' and harmony in 'I', Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity indetail, Programs to ensure Sanyam and Health

UNIT III	UNDERSTANDING HARMONY IN THE FAMILY AND SOCIETY- HARMONY IN HUMAN-HUMAN RELATIONSHIP	9 HOURS

Understanding harmony in the Family- the basic unit of human interaction , Understanding values in human-human relationship; meaning of Nyaya and program for its fulfillment to ensure Ubhay-tripti; Trust (Vishwas) and Respect (Samman) as the foundational values of relationship, Understanding the meaning of Vishwas; Difference between intention and competence, Understanding the meaning of Samman, Difference between respect and differentiation; the other salient values in relationship, Understanding the harmony in the society (society being an extension of family): Samadhan, Samridhi, Abhay, Sah-astitva as comprehensive Human Goals, Visualizing a universal harmonious order in society- Undivided Society (AkhandSamaj), Universal

Order (SarvabhaumVyawastha)- from family to worldfamily.

UNIT IV	UNDERSTANDING HARMONY IN THE NATURE AND EXISTENCE - WHOLE EXISTENCE AS CO-EXISTENCE	9 HOURS

Understanding the harmony in the Nature, Interconnectedness and mutual fulfillment among the four orders of nature- recycLability and self-regulation in nature, Understanding Existence as Co-existence (Sah-astitva) of mutually interacting units in all-pervasive space, Holistic perception of harmony at all levels of existence.

UNIT V	IMPLICATIONS OF THE ABOVE HOLISTIC UNDERSTANDING OF HARMONY ON PROFESSIONAL ETHICS	9 HOURS

Natural acceptance of human values, Definitiveness of Ethical Human Conduct, Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order, Competence in Professional Ethics: a) Ability to utilize the professional competence for augmenting universal human order, b) Ability to identify the scope and characteristics of people-friendly and eco-friendly production systems, technologies and management models, Case studies of typical holistic technologies, management models and production systems, Strategy for transition from the present state to Universal Human Order: a) At the level of individual: as socially and ecologically responsible engineers, technologists and managers, b) At the level of society: as mutually enriching institutions and organizations.

TOTAL HOURS : 45 HOURS & SELF LEARNING : 45 HOURS

TEXT BOOKS:

1. R R Gaur, R Sangal, G P Bagaria, Human Values and Professional Ethics Excel Books, New Delhi, 2010

3. Sussan George, 1976, How the Other Half Dies, Penguin Press. Reprinted 1986, 1991
4. Donella H. Meadows, Dennis L. Meadows, Jorgen Randers, William W. Behrens III, 1972, Limits to Growth – Club of Rome's report, Universe Books.

COURSE OUTCOMES

After completion of the course, the student will be able to

COURSE OUTCOMES	DESCRIPTION	KNOWLEDGE LEVEL
CO1	Explain the importance of value education, self-exploration, and human aspirations for achieving happiness and prosperity.	**K 2**
CO2	Analyze harmony within the human being by understanding the relationship between self ('I') and body, and practice self-discipline and healthy living.	**K 4**
CO3	Demonstrate understanding of human relationships, family values, trust, respect, and social harmony for peaceful coexistence.	**K 3**
CO4	Interpret the interconnectedness and mutual fulfillment among human beings, nature, and existence from a holistic perspective.	**K 4**
CO5	Apply ethical human values and professional ethics in engineering, technology, and management practices for sustainable and human-centered development.	**K 3**

CODE	ENGINEERING CHEMISTRY LAB		L	T	P	SL	C
			0	0	3	3	1.5
PRE-REQUISITE	NIL	CO-REQUISITE	ENGINEERING CHEMISTRY				

COURSE OBJECTIVES

The students will learn to:

- To analyze water and solution quality using chemical methods such as alkalinity, hardness, and chloride determination.
- To apply electrochemical techniques including conductometry, potentiometry and pH-metry for precise measurements.
- To investigate kinetics and adsorption through experiments on reaction rate constants and adsorption studies.

LIST OF EXPERIMENTS

1. Determination of type and amount of alkalinity present in the given water sample.
2. Determination of strength of the given acid by pH metry.
3. Determination of the amount of strong acid present in the given solution by conductometric titration.
4. Determination of mixture of acids by conductometric method.
5. Determination of cell constant and conductance of solution.
6. Estimation of amount of ferrous ion present in the whole of the given solution by Potentiometric method.
7. Estimation of amount of chloride present in the water sample by Argentometric analysis.
8. Determination of total, temporary and permanent hardness of the given water sample by EDTA method.
9. Determination of the rate constant of a reaction.
10. Estimation of adsorption of acetic acid by charcoal.

CODE	FUNDAMENTALS OF ELECTRICAL AND ELECTRONICS SCIENCES LAB		L	T	P	SL	C
			0	0	3	3	1.5
PRE-REQUISITE	NIL	CO-REQUISITE	FUNDAMENTALS OF ELECTRICAL AND ELECTRONICS SCIENCES				

COURSE OBJECTIVES

- Understand and verify the fundamental laws and theorems of electrical circuits through laboratory experiments.
- Investigate the performance and operating characteristics of electrical machines and transformers through load and performance tests.
- Study the characteristics and applications of basic electronic devices, including PN junction diodes, Zener diodes, and rectifier circuits.

LIST OF EXPERIMENTS

1. Verification of Ohm's law and Kirchhoff's laws.
2. To measure single phase power by using three ammeter method.
3. To measure the single phase power by using three voltmeter method
4. VI characteristics of PN junction and Zener diode
5. Implementation of Half wave and Full wave rectifier
6. Load Test on Single phase transformer
7. O.C and S.C Test on Single phase transformer
8. Load test on DC Shunt motor
9. Load test on DC series motor
10. Swimburne's test

CODE	STRUCTURED AND OBJECT ORIENTED PROGRAMMING LAB		L	T	P	SL	C
			0	0	3	3	1.5
PRE-REQUISITE	NIL	CO-REQUISITE	STRUCTURED AND OBJECT ORIENTED PROGRAMMING				

COURSE OBJECTIVES

- To develop basic programming skills using structured programming concepts.
- To apply control structures, arrays, functions, and pointers in solving problems.
- To understand and implement fundamental concepts of file handling and modular programming.

LIST OF EXPERIMENTS USING C

FUNDAMENTALS OF PROGRAMMING USING C

1. Introduction to programming environment and execution of simple C programs.
2. Solving basic problems using arithmetic expressions and operators.
3. Implementation of decision-making using conditional statements.
4. Development of programs using looping constructs.
5. Operations on one-dimensional arrays.
6. Solving problems using two-dimensional arrays (matrices).

FUNCTIONS, STRINGS, POINTERS, AND FILE PROCESSING IN C

7. Design and implementation of user-defined functions.
8. Implementation of recursive techniques.
9. Basic string handling operations.
10. Applications of pointers and structures.
11. Implementation of file handling operations including sequential and random access.
12. Development of simple searching and sorting algorithms.

LIST OF EXPERIMENTS USING C++

FUNDAMENTALS OF OBJECT-ORIENTED PROGRAMMING USING C++

1. Introduction to C++ programming environment and execution of simple programs.
2. Solving basic problems using arithmetic expressions in C++.
3. Implementation of classes and objects.
4. Demonstration of constructors, destructors, and function overloading.
5. Development of programs using inheritance concepts.

ADVANCED OBJECT-ORIENTED FEATURES AND FILE HANDLING IN C++

6. Implementation of polymorphism using virtual functions.
7. Exception handling using try, catch, and throw blocks.
8. File handling operations and basic template applications in C++.

TOTAL HOURS: 45 HOURS AND SELF LEARNING : 45 HOURS

SEMESTER II

SEMESTER II

CODE	MATHEMATICS-II (PROBABILITY AND STATISTICS)	L	T	P	SL	C
		3	0	2	4	4

PRE-REQUISITE	NIL	CO-REQUISITE	NIL

COURSE OBJECTIVES

- To provide fundamental knowledge of probability theory, random variables, probability distributions and statistical techniques for engineering and scientific applications.
- To develop the ability to apply correlation, regression and hypothesis testing methods for analysing and interpreting statistical data.
- To equip students with analytical skills in sampling theory, ANOVA and design of experiments for solving real-world problems involving variability and decision making.

.

UNIT I	BASIC PROBABILITY	12 hours

Introduction to Probability- Conditional probability – Bayes Theorem- Random Variables– Discrete random variables-Continuous Random Variables – Moments – Mathematical Expectations and its Properties – Covariance – Moment generating Functions – Probability mass function–Probability density function.

UNIT II	STANDARD DISTRIBUTIONS	12 hours

Introduction to theoretical distribution – Discrete Distributions Bernoulli, Binomial, Poisson, Geometric, Negative Binomial Distributions–Continuous Distribution– Uniform, Normal, Exponential and Gamma distribution–Weibull Distribution–Properties

UNIT III	CORRELATION AND REGRESSION ANALYSIS	12 hours

Correlation: Types of Correlation–Methods of studying correlation– Scatter diagram method, Karl Pearson's Coefficient of correlation, Spearman's Rank Correlation Coefficient. Regression: Regression Lines and Regression equations –- simple problems

UNIT IV	SAMPLING	12 hours

Testing of Hypothesis – Types of Errors – Critical Region ,Procedure for testing of hypothesis-Large Sample tests – Z test for single Proportion –Difference of Proportion – Mean and Difference of Means – Small sample tests-Student's t-test – F-test— Chi-square test for goodness of fit and independence of attributes.

UNIT V	ANOVA AND DESIGN OF EXPERIMENTS	12 HOURS

Introduction to ANOVA - Types of ANOVA – Components of an ANOVA Table – One –way Classification – Completely Randomised Design(CRD) – Advantages of CRD – Applications of CRD – Two-way Classifications – Randomized Block Design (RBD) and Latin Square Design (LSD) – Advantages and Applications of RBD and LSD

TOTAL : 60 HOURS & SELF LEARNING : 60 HOURS

TEXT BOOKS

1.Amit Gupta , Manish Sharma, The Practice of Business Statistics, Khanna Book Publishing

Company, 2026 (AICTE Recommended Textbook)

2. B.KrishnaGandhi, Dr.T.K.V.Iyyengar, Dr.M.V.S.S.N.Prasad, S.Ranganatham, S Chand Publishing , 2020

3. Das N. G., Statistical Methods, Combined Edition (Vol.I&II), Tata McGraw Hill,27th Edition, 2022.

4. Ross Sheldon M., Introduction to Probability and Statistics for Engineers and Scientists, 6th Edition, Elsevier, 2021.

REFERENCE BOOKS

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 45th Edition, 2024.
2. Mine Cetinkaya –Rundel and Johanna Hardin, Introduction to Modern Statistics, OpenIntro Inc.,2021
3. Montgomery Douglas and Runger, George C., Applied Statistics and Probability for Engineers, Wiley, 2016. Reena Garg, Engineering Mathematics, Khanna Publishing House, 2024

NPTEL LINKS:

1. Course Name : Probability and Statistics : Handled by :Prof. Somesh Kumar | IIT Kharagpur

   https://onlinecourses.nptel.ac.in/noc21_ma74/preview

LIST OF EXPERIMENTS

1. Computation of expected value for the probability mass function and probability density function.
2. Generate Binomial random variables and analyse their properties
3. Generate Negative Binomial distribution samples.
4. Testing of Hypothesis and Confidence intervals using – Z-test and t – test
5. Verify positive correlation using sample students marks .
6. Calculate rank correlation for ten students marks obtained in two subjects.
7. Perform one – way ANOVA using suitable example.
8. Analyse crop yield data using one way ANOVA.

COURSE OUTCOMES

After completion of the course, the student will be able to

COURSE OUTCOMES	DESCRIPTION	KNOWLEDGE LEVEL
CO1	*Analyze* discrete random variables and probability distributions	**K4**
CO2	Analyze continuous random variables and probability distributions	**K4**
CO3	Identify appropriate statistical measures for central tendency and dispersion	**K3**
CO4	Construct correlation coefficients and regression models for practical problem solving.	**K3**
CO5	Analyze the applications and limitations of hypothesis testing in engineering problems.	**K4**

CODE	ENGINEERING PHYSICS	L	T	P	SL	C
		3	0	0	3	3

PRE-REQUISITE	NIL	CO-REQUISITE	NIL

COURSE OBJECTIVES

- To learn the basics of electronic materials, semiconducting materials and their interaction with light, new engineered semiconductor devices.
- To apply these fundamental principles to solve practical problems related to materials used for engineering applications.

UNIT I	BAND THEORY OF SOLIDS	9 HOURS

Energy bands in solids: conductors - semiconductors and insulators – Band gaps in semiconductors - Direct and indirect band gaps semiconductors – Classical free electron theory - Drude and Lorentz classical free electron theory - electrical conductivity and thermal conductivity – Wiedemann-Franz Law –Lorentz number - Fermi distribution function - Effect of temperature on Fermi function – Density of energy states.

UNIT II	SEMICONDUCTORS	9 HOURS

Introduction - Properties of semiconductors – Classification of semiconductors – Types: Intrinsic and Extrinsic semiconductor - Carrier concentration of intrinsic and extrinsic (derivation) – Carrier concentration in n type and p type semiconductor – Variation of Fermi level with temperature and impurity concentration.

UNIT III	LIGHT-SEMICONDUCTOR INTERACTION	9 HOURS

Optical transitions in bulk semiconductors: Stimulated absorption - spontaneous and stimulated emission – Excitons - Population Inversion - Einstein's A & B coefficient (derivation) – Principle and working of Photovoltaic effect and Solar cells – Applications.

UNIT IV	SEMICONDUCTOR DEVICES AND MEASUREMENTS	9 HOURS

Semiconductor diodes – Characteristics - construction and working – Types of semiconductor diodes – Light Emitting Diode (LED) – Measurements: Principle and working of UV-Vis spectrophotometer - Hall effect – Hall effect in n-type and p-type semiconductor (derivation) – Experimental determination of Hall coefficient – Applications.

UNIT V	ADVANCED ENGINEERED SEMICONDUCTOR MATERIALS	9 HOURS

Metallic glasses, preparation, properties and applications - Shape Memory Alloys – Characteristics, Properties of Ni-Ti alloy - Applications – Quantum nanostructures - Semiconductor Nanomaterials: - Properties -Synthesis (top-down and bottom-up approach) – Pulsed Laser deposition – Chemical vapour deposition – Applications

TOTAL: 45 HOURS & SELF LEARNING : 45 HOURS

CODE	ENGINEERING GRAPHICS		L	T	P	SL	C
			3	1	0	3	3
PRE-REQUISITE	NIL	CO-REQUISITE	NIL				

COURSE OBJECTIVES

- To introduce the fundamentals of engineering drawing standards, conventions, and BIS specifications used in engineering practice.
- To develop the ability to visualize and construct orthographic projections of points, lines, planes, and solids.
- To impart knowledge in sectional views and development of surfaces of engineering components.
- To enhance spatial visualization and graphical communication skills through isometric and orthographic projections.
- To provide practical exposure to computer-aided drafting (CAD) tools for preparing engineering drawings and models

UNIT I	ENGINEERING CURVES	12 HOURS

Engineering curves used in mechanical and design applications – Construction of conic sections (ellipse, parabola, hyperbola) using eccentricity and auxiliary methods – Cycloid, epicycloid, and hypocycloid with applications in gear tooth profiles – Involute of square and circle with relevance to power transmission – Construction of tangents and normal – Industrial applications through component-based examples

UNIT II	PROJECTION OF POINTS, LINES AND PLANE SURFACES	12 HOURS

Projection of points and straight lines in all quadrants – Determination of true length and true inclination using Change of Position Methods and auxiliary planes – Projection of plane surfaces such as polygonal plates and circular lamina inclined to reference planes – Visualization techniques for interpreting multi-view drawings – Engineering applications involving structural plates, brackets, and machine elements.

UNIT III	PROJECTION OF SOLIDS	12 HOURS

Projection of simple solids including prisms, pyramids, cylinders, and cones – Axis inclined to one reference plane using change of position method – Auxiliary views for complex orientations – Visualization-based problem solving using real engineering components and assemblies.

UNIT IV	SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACES	12 HOURS

Concept and necessity of sectioning in engineering drawings – Sections of solids by cutting planes inclined to one reference plane – True shape of sections using auxiliary views.Development of lateral surfaces of simple and truncated solids. Applications in sheet metal fabrication and packaging

UNIT V	ISOMETRIC PROJECTIONS AND ORTHOGRAPHIC PROJECTIONS	12 HOURS

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones. General principles of orthographic projection –

Need for importance of multiple views and their placement - layout views -Visualization and interpretation of time three dimensional engineering objects from multi-view drawing. Introduction to 2D CAD drafting: basic commands, layers, dimensioning, and drawing standards – Applications in professional engineering documentation

TOTAL HOURS: 45 HOURS & SELF LEARNING : 45 HOURS

CODE	DIGITAL PRINCIPLES AND COMPUTER ORGANIZATION		L	T	P	SL	C
			3	0	0	3	3
PRE-REQUISITE	NIL	CO-REQUISITE	NIL				

COURSE OBJECTIVES

- To analyze and design combinational circuits.
- To analyze and design sequential circuits
- To understand the basic structure and operation of a digital computer.
- To study the design of data path unit, control unit for processor and to familiarize with the hazards.
- To understand the concept of various memories and I/O interfacing.

UNIT I	COMBINATIONAL LOGIC	9 hours

Combinational Circuits – Karnaugh Map - Analysis and Design Procedures – Binary Adder – Subtractor – Decimal Adder - Magnitude Comparator – Decoder – Encoder – Multiplexers - Demultiplexers

UNIT II	SYNCHRONOUS SEQUENTIAL LOGIC	9 hours

Introduction to Sequential Circuits – Flip-Flops – operation and excitation tables, Triggering of FF, Analysis and design of clocked sequential circuits – Design – Moore/Mealy models, state minimization, state assignment, circuit implementation - Registers – Counters.

UNIT III	COMPUTER FUNDAMENTALS	9 hours

Functional Units of a Digital Computer: Von Neumann Architecture – Operation and Operands of Computer Hardware Instruction – Instruction Set Architecture (ISA): Memory Location, Address and Operation – Instruction and Instruction Sequencing – Addressing Modes, Encoding of Machine Instruction – Interaction between Assembly and High Level Language.

UNIT IV	PROCESSOR	9 hours

Instruction Execution – Building a Data Path – Designing a Control Unit – Hardwired Control, Microprogrammed Control – Pipelining – Data Hazard – Control Hazards.

UNIT V	MEMORY AND I/O	9 hours

Memory Concepts and Hierarchy – Memory Management – Cache Memories: Mapping and Replacement Techniques – Virtual Memory – DMA – I/O – Accessing I/O: Parallel and Serial Interface – Interrupt I/O – Interconnection Standards: USB, SATA

CODE	STATISTICS USING PYTHON AND R PROGRAMMING		L	T	P	SL	C
			3	0	0	3	3
PRE-REQUISITE	NIL	CO-REQUISITE	NIL				

COURSE OBJECTIVES

- To develop a solid foundation in statistical concepts.
- To master the fundamentals of R and Python for statistical computing.
- To effectively utilize R and Python for data manipulation and analysis.
- To apply statistical methods to real-world problems.
- To foster critical thinking and problem-solving skills in the context of statistics.

UNIT I	INTRODUCTION TO PYTHON AND DATA HANDLING	9 HOURS

Introduction to Python – Python installation – Variables and operators – Reading data from keyboard – Data types: numbers, lists, dictionary – Decision making statements – Loops: for, while – Loop control statements: break, continue, pass – Introduction to Pandas – Pandas installation – Data structures: Series and DataFrame – Reading data from CSV files – loc() and iloc() functions – Descriptive statistics – Inserting and deleting columns in DataFrame – Concatenating DataFrames – Writing data to CSV files – Reading from Excel files – Merging and joining DataFrames – Group by and aggregate functions – Connecting Python to MySQL.

UNIT II	INTRODUCTION TO R PROGRAMMING AND DATA MANIPULATION	9 HOURS

Introduction to R programming – Installation and execution of R programs – Variables, operators and data types – Decision making and loops – Functions in R – Reading and writing CSV files – Reading Excel files – Package installation and loading – Introduction to dplyr library – dplyr functions: arrange, join, select, rename, filter, summarize, group_by, across and pipe operator – Data manipulation using dplyr – Connecting R to MySQL.

UNIT III	DATA VISUALIZATION AND ELEMENTARY STATISTICAL METHODS	9 HOURS

Data visualization techniques – Bar charts, grouped bar charts, stacked bar charts, histograms, line charts, pie charts, box plots, scatter plots, density plots, strip charts and QQ plots using Python and R – Probability distributions: Binomial, Poisson, Normal, Exponential, Chi-square, Student's t, F and Uniform distributions – Statistical testing methods – Z-Test, one sample and two sample Z-Test, F-Test and Student's t-Test – Implementation of statistical tests using Python and R..

UNIT IV	HYPOTHESIS TESTING AND NON-PARAMETRIC STATISTICAL METHODS	9 HOURS

Tests of hypothesis – Population mean with known and unknown variance – Population proportion – Goodness of fit – Chi-square test – Implementation of hypothesis testing using Python and R – Non-parametric tests – One-sample and two-sample tests – Two-sample sign test using Binomial distribution and Normal approximation – Wilcoxon signed-rank test – Mann-Whitney-Wilcoxon test – Kolmogorov-Smirnov test – Kruskal-Wallis H test – Implementation of non-parametric tests

using Python and R.		
UNIT V	**ANOVA, REGRESSION AND ADVANCED STATISTICAL ANALYSIS**	**9 HOURS**
Analysis of Variance (ANOVA) – One-way and Two-way ANOVA – Implementation of ANOVA using Python and R – Multivariate analysis – Correlation and covariance – Forecasting techniques: Simple moving average, weighted moving average and simple exponential smoothing – Regression techniques: Simple linear regression, multiple linear regression, polynomial regression, logistic regression and Poisson regression – Advanced graphs: lattice graphs, ggplot2 graphs, probability graphs, mosaic graphs and correlograms – Case studies and discussion.		

TOTAL : 45 HOURS & SELF LEARNING : 45 HOURS

CODE	DESIGN THINKING		L	T	P	SL	C
			2	0	0	2	2
PRE-REQUISITE	NIL	CO-REQUISITE	NIL				

COURSE OBJECTIVES

- Understand the principles and importance of Design Thinking in solving real-world problems.
- Analyze user needs and define problems clearly using empathy and problem-identification techniques.
- Generate innovative and creative ideas through various ideation and brainstorming methods.
- Evaluate and select effective solutions and develop prototypes or wireframes for validation.
- Apply the complete Design Thinking process to design user-centered solutions and communicate them effectively.

UNIT I	FUNDAMENTALS OF DESIGN THINKING - STEP 1: THE 'FEEL' STAGE	6 HOURS

Design Thinking and its significance – Design The ThinkingTM – Personal Visualization, The Wheel of Life & Balancing Priorities – Concept of 'Design' – The 3 Laws of Design Thinking Objectives of this stage – Role of a Design Thinker in this stage – Tools used in this stage – Purpose of this stage – Persona – Journey Mapping – Stakeholder Mapping - Cartographic Perspective (L0) – Empathy Map – Case Study: Stakeholder understanding and identification of the problem area (Project Area)

UNIT II	THE 'DEFINE' STAGE	6 HOURS

Purpose of this stage – Role of a Design Thinker – Key aspects of problem definition – Tools used in this stage – Purpose of this stage – Five-Whys – Anti-Pattern – 'How Might We?' – Ice Cream Stick – Problem paraphrasing – Challenge Mapping – 10-100-1000gm Tool – Definitive skillset for a Design Thinker – Case Study: Problem redefinition.

UNIT III	THE 'DIVERGENCE' STAGE	6 HOURS

Purpose of this stage – Role of a Design Thinker – Key aspects of idea generation – Tools used in this stage – Purpose of this stage – Brainstorming – Metaphor – Random Association Technique – Mind Mapping – End-State Visualization – Case Study: Problem expansion (Contd).

UNIT IV	THE 'CONVERGENCE' STAGE	6 HOURS

Purpose of this stage – Role of a Design Thinker – Key aspects of solution selection – Tools used in this stage – Purpose of this stage – 10gm-100gm-1000gm QBL – Prototyping – Wire framing for digital products – Case Study: Prototyping and communication for effective outcomes

UNIT V	THE 'COMMUNICATION' STAGE	6 HOURS

Purpose of this stage – Role of a Design Thinker – Key aspects of communication – Tools used in this stage – Purpose of this stage – The 4Cs Framework – Naming – Packaging – Storyboarding – Presentation – Distribution - Case Study: Prototyping and communication for effective outcome (Contd) – Final Project Presentation

1. **Design Thinking - A Primer - By Prof. Ashwin Mahalingam, Prof. Bala Ramadurai**

https://onlinecourses.nptel.ac.in/e-learning/preview/noc22_mg32

COURSE OUTCOMES (COs)

After completion of the course, the student will be able to

COURSE OUTCOMES	DESCRIPTION	KNOWLEDGE LEVEL
CO1	Explain the concepts, principles, and stages of Design Thinking and their role in problem-solving.	K2
CO2	Identify user needs and define problems using empathy-based and problem-analysis tools.	K3
CO3	Apply creative thinking techniques to generate innovative ideas and alternative solutions.	K3
CO4	Evaluate, select, and develop suitable solutions through prototyping and wireframing methods.	K4
CO5	Apply the Design Thinking process to real-world challenges and effectively communicate user-centered solutions.	K3

CODE	ENGINEERING PHYSICS LAB		L	T	P	SL	C
			0	0	3	3	1.5
PRE-REQUISITE	NIL	CO-REQUISITE	ENGINEERING PHYSICS				

COURSE OBJECTIVES

- To enable the student to explore the field of Mechanics of Solids and Properties of Matter.
- To gain knowledge in the scientific methods and learn the process of measuring different Physical variables.

LIST OF EXPERIMENTS

1. Determination of Rigidity Modulus – Torsional pendulum
2. Determination of wavelength and particle size using a laser
3. Ultrasonic Interferometer
4. Determination of the band gap of a semiconductor material
5. Hooke's law – Determination of spring constant
6. Determination of Young's Modulus – Uniform Bending
7. Determination of Young's Modulus – Non-Uniform Bending
8. Determination of Viscosity of a liquid - Poiseuille's method
9. Spectrometer – Grating
10. Deflection Magnetometer - Tan A position
11. Deflection Magnetometer - Tan B position
12. Potentiometer - Calibration of low-range Voltmeter

TOTAL HOURS : 30 HOURS & SELF LEARNING : 30 HOURS

TEXT BOOKS

1.. C. Ouseph, U. J. Rao, V. Vijiayendran, Practical Physics,1st Edition, 2015.

2. Biswajit Saha, Practical Physics Book, LAP LAMBERT Academic Publishing, 1st Edition, 2020.

REFERENCE BOOKS

1. G.L. Squires, Practical Physics, 4th Edition, Cambridge University Press, 2001.
2. D. Chattopadhyay, P.C. Rakshit, B. Saha, "An Advanced Course in Practical Physics", 2nd ed., Books & Allied Ltd., Calcutta, 1990

COURSE OUTCOMES

After completion of the course, the student will be able to

COURSE OUTCOMES	DESCRIPTION	KNOWLEDGE LEVEL
CO1	Measure the wavelength and particle size of the semiconductor diode laser.	K5
CO2	Analyse the coefficient of viscosity of a liquid.	K4
CO3	Estimate the band gap energy of the given semiconductor material.	K5
CO4	Determine the compressibility of the liquid using an ultrasonic interferometer	K5
CO5	Measure the Young's modulus of the given solid materials.	K5

CODE	FABRICATION AND WORKSHOP PRACTICES LAB		L	T	P	SL	C
			0	0	3	3	1.5
PRE-REQUISITE	NIL	CO-REQUISITE	NIL				

COURSE OBJECTIVES

1. To familiarize students with fabrication processes, machine tools and material handling techniques used in manufacturing industries.
2. To provide hands-on training in basic manufacturing, fabrication and workshop practices using conventional tools and equipment.
3. To develop teamwork, problem-solving ability and professional work ethics through practical workshop exercises and mini fabrication activities.
4. To encourage creativity and product realization skills through fabrication and manufacturing-based practical assignments.

DETAILED CONTENTS

1. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods (3 lectures)
2. CNC machining (2 lectures)
3. Fitting operations & power tools (1 lecture)
4. Electrical &Electronics (3 lecture)
5. Carpentry (1 lecture)
6. Plastic moulding, glass cutting (1 lecture)
7. Metal casting (1 lecture)
8. Welding (arc welding & gas welding), brazing (1 lecture)
9. Working principles of various Pumps (2 lectures)

GROUP A - FABRICATION **30 hours**

1. Machine shop **(9 hours)**

Machining: Basics of Machining Processes Equipment'S, Simple turning of cylindrical surface on MS rod using lathe machine tool, To make Facing and plain turning, step turning, drilling in the lathe.

2. Sheet metal **(9 hours)**

To make products as per the given dimensional tolerances, Tools and demonstration of producing model

3. Welding shop	**(6 hours)**
To make single, butt, lap and T fillet joint by arc welding with the back hand and fore hand welding techniques as per the given dimensions. To make simple Dust pan, Rectangular trays in sheet metal with the jigs as per the given Dimensions.	
4. Plumbing Works	**(6 hours)**
Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components.	
GROUP B (ELECTRICAL ENGINEERING)	**(15 hours)**
1. Residential house wiring using switches, fuse, indicator, lamp and energy meter. 2. Fluorescent lamp wiring. 2. Staircase wiring 3. Measurement of electrical quantities -voltage, current, power & power factor in RLC circuit. 4. Measurement of energy using single phase energy meter. 5. Measurement of resistance to earth of electrical equipment.	

TOTAL HOURS : 45 HOURS & SELF LEARNING : 45 HOURS

COURSE OUTCOMES

After completion of the course, the student will be able to

COURSE OUTCOMES	DESCRIPTION	KNOWLEDGE LEVEL
CO1	Explain the principles, tools, equipment, and safety procedures involved in manufacturing and electrical workshop practices.	K2
CO2	Perform basic machining operations such as facing, turning, step turning, and drilling using lathe machines.	K3
CO3	Fabricate sheet metal and welding joints/products according to given dimensions and tolerances.	K3
CO4	Apply plumbing techniques and electrical wiring methods for basic engineering and residential applications.	K3
CO5	Measure electrical quantities and demonstrate safe workshop practices while working individually and in teams.	K3

CODE	PYTHON PROGRAMMING LAB		L	T	P	SL	C
			0	0	3	3	1.5
PRE-REQUISITE	NIL	CO-REQUISITE	PYTHON PROGRAMMING				

COURSE OBJECTIVES

- To develop practical programming skills using Python syntax, operators, and control structures for problem solving.
- To implement Python data structures, functions, arrays, and exception handling techniques for developing efficient programs.
- To apply file handling, modules, packages, and Python libraries for data analysis and application development through hands-on exercises.

LIST OF EXPERIMENTS

FUNDAMENTALS OF PYTHON PROGRAMMING

1. Introduction to Python programming environment and execution of simple programs.
2. Solving basic problems using arithmetic expressions and operators.
3. Implementation of decision-making statements using if, if-else, and nested if.
4. Development of programs using looping constructs.
5. Programs using lists and list operations.
6. Programs using tuples, sets, and dictionaries.
7. String manipulation and built-in string operations.

FUNCTIONS, ARRAYS, AND EXCEPTION HANDLING

8. Programs using list, set, and dictionary comprehensions.
9. Implementation of accumulation techniques for solving simple problems.
10. Development of programs using user-defined functions.
11. Programs demonstrating parameter passing and recursion.
12. Programs using lambda functions and built-in functions.
13. Operations on one-dimensional and two-dimensional arrays.
14. Exception handling using try, except, finally, and raise statements.

DATA ANALYSIS USING PYTHON LIBRARIES

15. Programs using NumPy arrays, indexing, and array operations.
16. Data manipulation using Pandas Series and DataFrames.
17. Handling missing data and basic data analysis using Pandas.
18. Data visualization using Matplotlib line, bar, and scatter plots.

FILE HANDLING AND MODULAR PROGRAMMING

19. File handling operations including reading, writing, and appending text files.
20. Programs using modules, packages, and command line arguments.

TOTAL HOURS : 45 HOURS & SELF LEARNING : 45 HOURS
